

# SALT CHECK

## Salt Water Determination Test Kit

It is important to know the nature of water (fresh or salt) found in lubricating or fuel oil to identify the source of the leakage as soon as possible.

### Features:

- Measuring range: Salt
- Measuring time: about 10 min.

### Benefits:

- Quick results
- Easy to handle even for untrained personnel
- Simple handling and for transport

The SALT/FRESH WATER CHECK is an easy and quick method to check the salinity in fluids: Through the color change of the indicator pad the salt test proves this in a few minutes

The pad is prick with a needle for 4-5 times and put in a Petri dish. The oil sample which is mixed with water is done on the pad with a pipette. It is possible to check in about 2 minutes if the oil is contaminated with salt. Experience with this check allows the rough determining of the salt contamination in vol. %.
